

Spring AI Sample Product Data

Sample dataset for testing DataLoader, embeddings, semantic search, and vector-store integration.

1. Laptop and Smartphone Data

ID	Product	Category	Price (INR)	Description
1	ASUS Vivobook 16	Laptop	64,999	Powerful laptop suitable for programming, development, and everyday productivity.
2	Dell Inspiron 15	Laptop	57,999	Reliable laptop designed for students, professionals, and general computing.
3	HP Pavilion 14	Laptop	62,999	Good performance for software development, office work, browsing, and entertainment.
4	Samsung Galaxy S25	Smartphone	79,999	Premium smartphone with high-performance processor, excellent camera, and fast charging.
5	iPhone 16	Smartphone	79,900	Powerful smartphone with an advanced camera system and high-quality display.

2. Additional Product Information

ASUS Vivobook 16: Designed for students, developers, and professionals who need a large display and strong processing performance. Suitable for Java development, web development, office applications, and general productivity.

Dell Inspiron 15: A balanced laptop for everyday computing, programming practice, documentation, web browsing, and professional applications.

HP Pavilion 14: A compact productivity laptop that can be used for coding, office tasks, online learning, and entertainment.

Samsung Galaxy S25: A premium Android smartphone focused on performance, photography, display quality, and everyday communication.

iPhone 16: Apple's smartphone offering strong performance, camera capabilities, software integration, and a high-quality display.

Additional products and searchable descriptions for semantic-search testing.

3. Audio, Accessories, and Smart Home Data

ID	Product	Category	Price (INR)	Description
6	Sony WH-1000XM5	Headphones	29,990	Wireless headphones with excellent noise cancellation and high-quality a
7	Logitech MX Master 3S	Mouse	8,995	Wireless productivity mouse designed for developers and professionals.
8	Keychron K2	Keyboard	8,999	Compact mechanical wireless keyboard suitable for programmers and off
9	MacBook Air M3	Laptop	1,14,900	Lightweight laptop with strong performance and long battery life.
10	Amazon Echo Dot	Smart Home	5,499	Compact smart speaker supporting voice commands, music, and smart-h

4. Semantic Search Test Questions

- Which products are suitable for software developers?
- Find laptops that are useful for programming.
- Which product provides noise cancellation?
- Show me wireless productivity accessories.
- Which products are suitable for office work?
- Find a lightweight laptop with long battery life.
- Which products belong to the smartphone category?
- Find a smart-home device that supports voice commands.

5. Example Document Content

Technology products can be searched using natural-language queries. A user may ask for a laptop for programming, a wireless accessory for productivity, or a smartphone with a high-quality camera. The embedding model can convert the product descriptions into vectors, which can then be stored in a vector database and retrieved using semantic similarity.

Purpose: This PDF can be loaded by a Spring AI DataLoader and used as source content for document extraction, chunking, embedding generation, and vector-store testing.
